

Zodiac Division at a sign level or Division at a star level: KP method divides and subdivides a STAR into **variable** size arcs whereas a SIGN is divided into **equal** arcs in divisional charts. The method used to decide a ruler for a division is based upon two different approaches. If Nakshatra based dasa system is used then it makes sense in KP division philosophy and the assignment of rulers to each division thereof. Divisions based upon signs are harmonic charts which are very common in western astrology as well for aspect analysis and there is also some theme attached to each harmonic, which is more or less is the same in Vedic astrology. Fine-tuning of ascendant in higher division for accuracy is an uphill task whereas in Krishnamurti Paddhati only sublord of ascendant needs to be refined which is less complex. There are no well-defined rules to read these divisional charts in traditional approach, everyone has their own way of reading these charts based upon their experience, whereas in KP method the rules are well defined, simple and easy to apply. We will provide a systematic approach of reading divisional charts but will need some insight into KP approach first. Only D9 chart has 4 equal divisions of each star by coincidence called nakshatra pada. D9 chart can be compared with KP divisions for some subtle learning, not for anything else. A simple formula for erecting divisional charts is given along with a table of vedic naming convention from nakshatra pada. A **Kth** divisional chart has **K** mini-zodiacs corresponding to your natal chart. D3 chart will have 3 mini zodiacs, now each of these 3 mini zodiacs has different meanings. One needs to figure out how these mini zodiacs map back in your original chart and for what purpose. The same principle applies to each divisional chart. 64th navamsa is 4th house of 6th mini-zodiac (out of 9 mini-zodiacs) in D9 chart. The following formula will work with all the divisional charts except Parsari Dasamsa D10 and Parsari Drekkana D3 charts.

For any division K, a divisional chart is constructed for any longitude of a planet or a point using formula: **Longitude of Planet/ASC in a Divisional chart = (Longitude in Natal Chart *K) %360**

- **Division of a STAR in Traditional Navamsa Chart: *Why Number 108 so symbolic? Why Ashtotari dasa period spans 108 years? Why japa is performed 108 times?***
 - Each Star is of arc length 13°20' which has a unique RULER based upon the **sequence in Vimshotari dasa** system.
 - There are total of 27 stars and 12 signs (i.e. 9 pada in each sign) which cover 360°zodiac
 - Each star is sub divided into 4 parts of 3°20' each, called PADA with a RULER based upon the **sequence of signs in the zodiac**
 - Starting from 1st star Ashwani the pada RULERS are Aries through Pisces then keep repeating Aries through Pisces and so on till the table is exhausted for all stars
 - Pada RULERS are the signs in Navamsa chart (D9 division)
 - Vedic names are based upon these 108 pada. A reference look up table included

- **Division of a STAR in Krishnamurthi's System:**
 - Each Star is of size 13°20' which has a unique RULER based upon the **sequence in Vimshotari dasa** system.
 - Each Star is further divided into 9 parts (for each planet) of **variable arc size** called a SUBLORD. The way the variable arc sizes are implemented and the rulers assigned for each division is the key differentiating philosophy in traditional v/s KP approach.
 - Each SUBLORD is further sub-divided into 9 parts of **variable arc sizes** called a SUBSUBLORD and so on so forth, again following the **sequence in Vimshotari dasa**

- Variable arc size is the arc size based upon the weightage of dasa years of a planet out of the total 120 years of Vimshotari dasa system.
 - The arc sizes of VE/ME/SA/JU/RA as sublord is much larger than arc sizes of KE/SU/MA as sublord due to their variable weightage
- **What is the difference in KP division of zodiac v/s divisional charts in traditional methods**
- The way rulers for each division are assigned
 - Divisional charts are based upon division of each of the 12 signs covering 360° zodiac
 - KP division is based upon division of each of the 27 stars covering 360° zodiac
 - Navamsa is 9th division (same size) of **a sign** whereas sublord is 9th division (variable size) of **a star**
 - If zodiac is divided into 27 Vedic Nakshatras to start with in accordance to Vimshotari Dasa Sequence then it's logical that the Nakshatras should have been further subdivided based upon Vimshotari dasa sequence. This is the key idea of KP stellar method
 - This difference is important to understand for inferring traditional divisional charts
- **Why KP approach is different as compared to traditional methods in predictive astrology**
- The method is logical and scientific and there is no degree of freedom for predicting outcome of an event. It's a simple rule based revolutionary technique
 - There is nothing to memorize except couple of key fundamental concepts
 - All planets play key roles and there are no positive/negative attributes inherited
 - There is no concept of yoga whatsoever and no divisional charts to worry about
 - Transits are modeled in a very innovative manner and provide superior accuracy
 - There is no other well-known systematic method that fairs well specially in predictive branch of astrology for accurate timing of events

Nakshatra Pada Rulers (Navamsa signs) D9 chart
